Home / Travel Tips + More / Browsing the Internet Safely When Traveling: Our Cocoon Browser ReviewPlease follow local guidelines to stay safe. And check what’s open before your trip. Also, we use affiliate links. If you make a purchase through them, we may receive a small commission at no cost to you. You’re in a Parisian café booking the next train for your Europe trip on your laptop. Then you wonder if that long-haired Bohemian at the next table could actually be a hacker. Can he access your passwords and steal your credit card and other sensitive information? If you’re like us, you’ve probably thought more than once about whether your computer use when traveling is safe. So we were intrigued when asked to try out the free Cocoon Browser and write a Cocoon Browser review. In a coffee shop abroad? Is it safe to check your bank statements online or log in to your Facebook account? What is the Cocoon Browser? Hotels, airports, airplanes, coffee shops and other places with public WiFi are unfortunately all prime spots for digital theft. Enter the Cocoon Browser. It’s a tool that helps keep you safe when browsing the Internet on unsecured networks. Specifically, it’s a cloud-based browser for your computer. Instead of using Chrome or Safari, you use the Cocoon Browser. The Cocoon Browser home page How does it work? Your browser is the gateway to your computer. When you use the Internet, you’re constantly being tracked and followed. “Cookies” are normally left on your computer; they pass on information about you and your browsing behaviour to websites. And you’re always under threat from viruses and malware. (Hopefully you have a good anti-virus program!) The Cocoon Browser works by putting Cocoon’s servers between you and the Internet. They act as a proxy or intermediary between your computer and the Internet. When browsing, your information and web traffic goes back and forth through Cocoon’s secure servers. And all your information, passwords and browsing history are encrypted. Maybe you’ve heard of a virtual private network? It effectively works like a VPN. Usually VPNs are paid services, but like we said, the Cocoon Browser is free. Proxy servers (which make your Internet activities look like they’re coming from Cocoon’s location in the U.S.), encryption and commercial anti-virus/anti-malware all help protect you so you can shop, check your bank statements and pay your credit cards online without worrying. Check here for details on how Cocoon works. The free Cocoon Browser helps protect you against digital hackers when traveling Our Cocoon Browser review: How do you benefit when traveling? 1) Privacy: One feature we like is that Cocoon automatically deletes all cookies after each session. Yes, it’s a bit of a pain because each time you log on to Booking.com or other websites, you have to enter your passwords again. But the upside is that sites won’t know your previous searches. And this can be a BIG upside. Have you ever noticed when looking for flights that sometimes prices jump the next time you enter the same search data? That can happen because the site knows you’re interested in particular flights. (We’ve thought of using the “incognito” feature on our Chrome browser, but never seem to do it, because it’s a forgotten extra step.) Anyway, when using Cocoon, you can be sure websites really do show you the lowest price (since they won’t have any tracking information on you). 2) Accessibility in restrictive countries: Another plus is that you can access Facebook or Google in countries like China that block these websites. Your access to information won’t be censored – you can post pics of yourself walking along the Great Wall of China and read “real” news. Keep up with Facebook and use Google no matter where you travel, even in China, which blocks these sites 3) Netflix! If you’re a Netflix fan, you’ll find this appealing. You can watch all those fabulous U.S. Netflix shows no matter where you are in the world. So don’t worry if jetting off to Australia for a month that you’ll forget what happened in the last Breaking Bad or The Tudors episode you saw (Netflix Australia doesn’t offer these shows) – you can still binge on your favorite U.S. Netflix shows in the Land of Oz, even Mozambique (if you have Internet). We’re always a little jealous of our American friends who get to watch so many more shows on Netflix than we can watch here in Canada, where Netflix’s offerings are more limited. So it was fun when playing around with the Cocoon Browser to discover that we can now watch shows like Versailles (not available here on Canadian Netflix). On a 13-inch laptop via Cocoon, our viewing experience was the same as watching other TV shows through Chrome, i.e., high-def resolution and no buffering. Don’t worry! Netflix is with you :) Is Cocoon reputable? It did occur to us before delving into our Cocoon Browser review and downloading the browser that we might be downloading something shady. So we first did some checking on Virtual World Computing, the company behind Cocoon. Upon Googling, we learned it’s been around for a while (since 2008) and they’ve been written up by CNET, Laptop Magazine, PC Magazine and PCWorld. We also noted the company has some impressive advisors, like Shopkick co-founder Aaron Emigh who is an expert in information security. He’s also a member of the US Department of Homeland Security Identity Theft Technology Council and the U.S. Secret Service Electronic Crimes Task Force. (We figured if he’s onboard, the Cocoon Browser would be safe for us to download!) How to download the Cocoon Browser Getting Cocoon onto your laptop is quite easy. Go to the Download page, and follow the steps. The only thing that stumped us for a few minutes was trying to figure out how to log in to the Cocoon Browser and use it after downloading it. So we went to Cocoon’s Support tab and found the answer under “How do I sign in?” You have to click the little power button to the left of the word “Cocoon” at the upper left of your screen. Then you can enter your email and log in to your Cocoon account. After logging in, this is how Cocoon looks on your screen Happy and safe travels! Pin to Pinterest! Here’s a good pin :) Disclosure: Virtual World Computing asked us to write a Cocoon Browser review. The research we did and the words and opinions expressed here are completely our own, however. As is our satisfaction at coming across something to protect us (for free!) when browsing online during our travels... COCOON our legacy secure privacy browser is currently unavailable for download. If you are a current Cocoon user we will continue to serve you. Support Disclosure: This post may contain affiliate links. We may receive a commission when you click on them, but this is at no extra cost to you. Read our privacy policy for more information. There are many articles that have extensively covered a variety of money-making apps, side jobs, and passive income opportunities out there, especially here on Frugal for Less. But there’s one money-making opportunity that’s hardly mentioned – earning with your web browser. There are many browser extensions that pop up whenever a coupon or deal can be found on the website such as: Ebates Cash Back button – Applies cash-back promotions automatically to the site you’re on Amazon Assistant – Notifies you of any deals available Honey – Shows coupon codes available for the store you’re visiting Qmee – Shows price comparisons and where that item is available cheaper But the Cocoon Browser plug-in is different. Cocoon is one of a very few browser plug-ins that pays users to simply use it to surf the internet. Cocoon is offered by the Virtual World Computing company and “is dedicated to the end-user’s internet experience”. The cocoon browser is available in two versions – Cocoon and Cocoon Asia. The standard Cocoon browser is available in the US, France, Spain, UK, India, Canada, and many other countries, while the Cocoon Asia version is available in China, Hong Kong, Taiwan, South Korea, Vietnam, and Singapore. The browsers are available to download for Windows, Mac, and soon there’ll be an Android version available. Let’s see what the Cocoon Browser has to offer: What is the Cocoon Browser Extension? The Cocoon plug-in for your browser creates a secure encrypted connection to the Internet so that no one can see your browsing history when you’re online. This means that the servers and websites you connect to can’t see who you are or where you are connecting from. So, you’re not just getting extra privacy and protective software, you also earn money by surfing the web with it. Have you ever used social media, such as Facebook, and noticed they’re advertising products that you’ve previously looked at? Cocoon will stop all that annoying junk. Not only does Cocoon enhance your online safety and privacy, you’ll get paid just for surfing the internet, the average user can make about \$150 to \$300 a year. Cocoon will work with Google Search and Google Maps and you can even set Google to be your homepage on the Cocoon browser. Is Cocoon Safe to Use? The Cocoon browser comes with an anti-virus and anti-malware program as well as many other protective services that standard browsers don’t, or even those offered by the AVG Anti-Virus program. Some of the computer protection services that Cocoon offer include: End-to-End Encryption Proxied Browsing Email Scanner Protective Cloud Technology Hard Drive Protection Anti-Virus, Anti-Malware, and Anti-Rootkit File Transfer Protection Protection from Phishing Websites Cocoon also protects your privacy by using “isolation technology” that prevents companies from tracking your movements around the web or using your browsing history data. The cocoon browser is free to use, but they do have a paid version. The paid version is \$19.95 a year and offers additional anti-virus protection as well as ad-free browsing. If you’re worried that your current installed virus software isn’t working well, you should try Cocoon. How to Sign Up on Cocoon You need to go to the Cocoon website and create an account. Here’s how to begin: On the sign-up page enter your email and a password, agree to the terms, and click Join. Once signed up you’ll need to download the Cocoon browser. On the Mac, open the vwc.cocoon.dmg file and drag the cocoon application to the Applications folder, then open the Applications folder and double-click the Cocoon app to start. On the PC: Start the download and click “Save”, double-click the file to begin installing, once done the Cocoon windows opens and you’re ready. You can sign in with your new account information and start setting up your preferences (like making Google your homepage). That’s it! It’s pretty easy – sign up, download, sign in. Then you can surf the internet as usual. How do You Make Money with Cocoon? As I mentioned, you can make around \$150 to \$300 a year from browsing on Cocoon. Cocoon has a program called Cocoon MDR, or MyData Rewards. How much you’ll actually make depends on how much you use the browser as well as the variety of sites you visit. Market rates change from season to season, but they state the average is \$150 – \$300 a year, which is a great passive income for doing basically nothing but your usual web surfing. Cocoon does take 20% of the profits from selling your data though. You can maximize your earnings by: Use the browser more – The more you surf with Cocoon, the more you earn. Visit different sites – The more variety of sites you visit the more data you’ll share and the more valuable your data becomes Use Cocoon during Seasonal Changes – Market researchers are more interested in data when seasons change, so use your browser for your holiday shopping and other popular shopping times. All your data is collected anonymously and any personal identification is removed before sending to market researchers. No data is collected for any visits to financial institutions, government agencies, healthcare content, or adult-themed websites. Unfortunately, MyData Rewards is only available to those in the United States, this is because they do not accept the use of VPNs – Virtual Private Networks. Both the computer or phone and the IP address must be located in the United States. What are the Payout Options? The only payout option currently offered by Cocoon is direct deposit to a PayPal account. Once you begin using the Cocoon browser, there’s first a 45-day period to establish your account. After that, you’ll start earning in monthly increments and this can be tracked on your Cocoon homepage. Since Cocoon wants to avoid handling fees, they do not accept on-demand payout requests from members. Instead, your payments are deposited to your PayPal account quarterly. The dates of the deposits are: March 31st June 30th September 30th December 31st Cocoon is currently working on adding more payout rewards to be available in the future. Other Users Review the Cocoon Browser! was only able to find one user review site on Softonic from 2012. There were only 95 users that voted and Cocoon was rated 8 out of 10. A few comments were: “Been using it for a little while and starting to like it more and more, the anonymous email is awesome and should be standard with all email programs.” “This is something of which, well, is like a cocoon. You create an account, later log into account and, you, the user, are now enveloped in a blanket, yes again, cocoon, of protection.” “These reviews were written in 2012, so I’m not sure on their validity these days and I assume the browser has improved a lot more in the last 7 years. I also decided to research the parent company – Virtual World Computing: Established in 2008 Featured in magazines such as CNET, PC Magazine, and PCWorld (but the latest version I found was from 2015) One of the Board members is Aaron Emigh, current co-founder and CEO of Brilliant, former co-founder and CTO of Shopkick, and also worked as CTO for Maven, the founder of eBay, and created many patents and technology software for security and data privacy. So, if the company has been around for quite a while, been sponsored by several technical magazines in the past, as well as having one of their board members be an experienced user and creator of secure technology, I would assume that Cocoon would be legitimate. Pros and Cons of Using the Cocoon Browser Here are my pros and cons from studying the Cocoon browser: Pros: Private and safe internet browsing Can create temporary email addresses Prevent companies from tracking your data, which means no more browser history focused advertising Stores your browsing information on the Cloud instead of your computer Secure connection on public Wi-Fi servers Cons: Doesn’t work on all websites and may need to turn privacy off in order to be compatible No on-demand payment available Cannot earn money with other data-tracking apps Could cause problems after uninstalling Similar Money-Making Browsers I have mentioned a few money-making browser extensions at the beginning of this article, but here are a few more: Piggy – \$5 to sign up and get notified for coupon codes and cash-back offers. InvisibleHand – Shows available coupons and discounts for the traveler (hotels, car rentals, and flights) Browsy – Get 200 points for signing up and earn by leaving your browser open Perk.tv – Part of the Perk App family, you earn 2 points per video ad watched on its browser Wallaby – For credit card users and it will show you bonuses for those credit cards (such as bonus points or cash-back) Swagbucks – Get \$5 when signing up and 50 points when installing the SwagButton extension for any points earnings available on any website. Understand though, these are just shopping or cash-back extensions and not security and protection extensions. My Final Thoughts! I personally didn’t download Cocoon for myself to test out. I have several accessibility features set up on my laptop and browser and did not want to lose those. Nevertheless, here are my final thoughts on Cocoon: Many browsers offer privacy or protection options but not both – the Cocoon browser claims to do both. This would be a great browser for those who travel a lot as it offers protection while using public WiFi. You may recall a great money-saving travel trick is to clear your cache of cookies because some travel sites raise their prices each time you visit their site, by using Cocoon you will prevent this from happening. Although Cocoon can be used in many countries, you’ll only earn for your data in the United States. I’m still on the fence on whether you should get the Cocoon Browser or not. On the plus side, it offers a lot more privacy and safety features than standard browsers and the AVT Anti-Virus software has. On the negative side, if this program is so great why isn’t it more popular? The RestorePrivacy website listed their top private and secure browsers and their top 5 were: Firefox (modified and tweaked for privacy) Iridium browser GNU IceCat browser Tor browser Ungogged Chromium browser I tried searching on this site for Cocoon, but it returned no results. So, if you’re really worried about your privacy then go ahead and get Cocoon, otherwise, I don’t think it matters much. Be warned though that you should only use browsers and browser extensions from verified sites, otherwise they may contain spyware or other malicious software that’ll track your movements online or damages your computer.
